https://medium.com/ux-power-tools/tiny-trends-1-non-rectangular-headers-e8d2d4ee578f

Amount of work needed to be accomplished : A little.

Options available: There seem to be a few ways of doing this varying from SVG, clip-path, border radius, transform:skew but all seem to take the same amount of work.

Good development choice : yes

First dev step : read about options, see what is supposed and what shapes can be created and see how responsive header will be.

3. Design 3 - Disable browser back button during the sign up process to prevent flow from being disrupted. User should only use these buttons for navigation through the flow.

1st Google search with key words: how to disable browser back button to prevent flow from being disrupted

Results : 725,000 results

 Time : 0.64 seconds

3rd Google search with key words: back button as navigation

Results: 8,730,000 results

Time: 0.47 seconds

Most relevant: none as most results had to do with IOS app developing.

Amount of work needed to be accomplished : Can be a lot if you are not sure what to do.

Options available: Disabling through Javascript.

Good development choice : No

First dev step: Upon reading this "You **can-not** actually disable browser back button. However you can do magic using your logic to prevent user from navigating back which will create an impression like it is disabled", decide how this can be done and how via JS and wether you want the form to keep the info that has been submitted.

2. "Indoor" and "Outdoors" buttons will submit the form.

1st Google search with key words: create custom buttons with images

Results : 855,000 results

 Time : 0.32 seconds
